

Complete DOD RFID Solution For \$2,995.00

This solution includes a high quality Industrial Thermal Printer with embedded RFID reader/writer, 500 4x6 RFID labels, a printer ribbon and comprehensive DOD software.

Due to the failure of the major AIDC manufacturers to provide a reasonably priced RFID product, Ensync Technologies has decided to market its unique, patented, product directly to the consumer at the fair market price shown above.

The printer is an OEM version of the Toshiba TEC BSX-4 high quality industrial thermal printer, using Ensync's RF2400 reader/writer module. This device uses a custom Far Field antenna for encoding the RFID tags, thus avoiding a known problem with the use of near field antennas in these printers.

The software is either RFID Tag Manager for DOD from EPC Solutions (<http://epcsolutions.com/prod/?q=rtm/dod>) or Std-Barc with RFID Load Manager from Mil-Pac Technology (<http://www.milpac.com/>). DoD suppliers can easily meet the RFID requirements for tagging products being sent to the DoD RFID enabled locations and creating the electronic Wide Area Work Flow documents for those transactions.
